CE 572 – Spring 2015
Class 30

2015.04.06

- What does it mean when g_s is longer than the maximum green time? Which of these two parameters controls the phase duration?

- What is the relationship between MAH and PT?

- Is there a correlation (causation?) between X and the max out probability?

- What is a timer?

- Describe the intersection performance based on your results.
